

CHURCHILL

Hybrid Oilseed Rape

Status: AHDB Candidate List 2024/2025

Churchill, the winter oilseed variety, is a game-changer for growers. Developed by DSV, it is one of the first phoma blocker varieties from DSV with both RLM7 and RLMs resistance mechanisms to stem canker, offering the ultimate protection and reduced risk of breakdown.

Churchill is not only a high-yielding variety, but it is also one of the healthiest at maturity according to DSV’s breeder, before desiccation. The variety also has good tolerance to Verticillium Wilt, very good LLS resistance and TuYV protection.

This new generation of hybrids boasts high autumn and spring vigour and a good score for winter hardiness. It is an early flowering type with an early to medium maturity date.

What sets Churchill apart from the pack is its very high oil content of 46.5, giving growers the potential to reach oil bonuses at harvest. It achieved highest gross outputs in the North where it is yielding particularly well. Churchill ensures prolonged plant stability with high scores for stem stiffness and lodging, making it a reliable and consistent variety. Make the switch to Churchill and reap the benefits of a variety that is not only high-yielding but also offers superior protection and stability.

Gross Output	104% (UK) 103% (E/W) 106% (N)
Seed Yield	102% (UK) 102% (E/W) 104% (N)
Oil Content	46.5%
Winter Hardiness	High
Autumn Vigour	High
Spring Vigour	High
Plant Height	151cm
Flowering	6
Maturity	6
Lodging	9
Stem Stiffness	8
Light Leaf Spot	6
Stem Canker	8
