

DAYMON

Hybrid Oilseed Rape

Turnip Yellow
Virus Resistance

Verticillium Wilt
Protection

Phoma
Blocker

Pod Shatter
Resistance

High Oil
Content

DAYMON is a new high-performance hybrid from DSV UK, combining excellent standing ability with consistently high yields. It features **Dual Phoma Resistance**, including the valuable RLM7 + RLMS package, an increasingly important trait as reliance on RLM7 alone becomes less effective against evolving disease pressure.

The variety also offers **Pod Shatter Resistance**, providing growers with greater confidence during the pre-harvest period, particularly when crops are exposed to storms or hail.

With a **High Oil Content of 46.5%**, DAYMON delivers strong market appeal and the potential for enhanced returns through oil bonuses. It performs particularly well in northern regions, where it has demonstrated excellent yield consistency.

DAYMON has a robust disease resistance profile, including ratings of 8 for **Light Leaf Spot** and 8 for **Stem Canker**, alongside strong resistance to **Verticillium Wilt**. Its wide drilling window supports the development of vigorous, resilient plants in both autumn and spring. The growth habit is well-suited to northern conditions and areas prone to frost.

Overall, DAYMON combines a multi-stacked trait package, **Pod Shatter Resistance, Dual Phoma Resistance, and TuYV Protection**, with proven, consistent performance across Europe.

Agronomic features

Stem Stiffness		Good
Lodging Resistance		Strong
Earliness of Maturity		Medium
Plant Length	152 cm	Long
