

NEW: Plurax CL

Status: Common Catalogue

Plurax CL is the latest Clearfield winter oilseed rape variety released by DSV. Plurax CL has the highest gross output and highest oil content of the Clearfield varieties independently tested by NIAB in the two year data set. It is one of the few varieties which has been tested across 7 sites over two years. It has been bred and selected to bring together DSV's pioneering genetics with the latest Clearfield® hybrid technology.

Plurax CL is a step forward in Clearfield® genetics as it has been specifically bred to have a strong tolerance to Verticillium Wilt and has proven itself in recent ADAS trials. It is a new generation hybrid with high yields and outstanding levels of oil content. In NIAB trials from 2018 Plurax CL has produced a very high seed yield and the highest oil content of 45.6%. It is quick to establish in the autumn putting down a robust rooting system. Its stem stiffness and resistance to lodging are two of its key strengths. The NIAB data for 2018 put Plurax CL as the second most vigorous variety in the autumn, highlighting Plurax CL's autumn vigour – being on par with market leading varieties – for making maximum use of the first 45 days of growth after drilling, where OSR plants lay the foundations for future yields. Plurax CL has a strong agronomic package with a score of 7 for Light Leaf Spot and 6 for Stem Canker.

Plurax CL is suitable for sowing in a range of soil types and conditions, due to its autumn vigour and the branching capacity of the plant. DSV would recommend planting this variety at 50 seed/m².

Agronomy Characters	
Gross Output	104%
Seed Yield	103%
Oil Content	45.6 %
Tolerance to Verticillium Wilt	High
Vigour Autumn	High
Winter Hardness	High
Plant Height	149 cm
Earliness of Flowering	7
Maturity	7
Resistance to Lodging	8
Stem Stiffness	9
Light Leaf Spot	7
Stem Canker	6

Creation date: 03.04.2019

Innovation for
your growth

"**PLURAX CL** is the latest Clearfield winter oilseed rape variety released by DSV. It is a very well balanced variety with a unique combination of yield stabilising factors. One of these factors is the good package of disease resistances consisting of excellent resistances and tolerances against stem canker, LLS and Verticillium wilt. It has also shown, a very high level of winterhardiness in private and official trial networks. Like most of the other varieties, **DSV PLURAX CL** has very good lodging resistance and high oil content. Therefore, it is easy to manage and gives a high profit to the grower."

Dr Alexander Doering, Product Manager OSR International
